Part III ACTION

1. The preliminary amendment has now been entered. Claims 21-39 are pending.
2. A full action on the merits of this case cannot be properly undertaken because of the nebulous nature and poor construction of the claims.
3. New claims 29-47 have been renumbered as 40-58 respectively under Rule 126.

Applicant is required to:

A) provide a courtesy copy of the claims with each element numbered and to exact figure to which it is directed.

From a cursory reading of the ten! (10) independent claims, it appears that a restriction and election are essential. Additionally, a provisional **double patenting** rejection is possible with respect to copending application **08/441,117 and 08/477,703**. Applicant should closely review the claims in both cases.

B) amend the claims to provide a clear structurally unified assembly.

For example, in claim 40, the functional language must have clear structural support. What elements operate to "...permitting flow ...to and from..."? Many claims recite a closed end, but then set forth a projecting portion which pierces the closed end. Claims 49-57 are vaguely descriptive.

C) precisely identify the areas of the specification which provide antecedent support for the claim language.

The specification sets forth many different embodiments and many subcombinations. However, some of the subcombinations are not useable with each other; therefore, a claim might improperly depend on another. For example, a claim directed to figure 354 could not depend from a claim directed to figure 385.
